

As with all issues that are BETTER than their own, the NAB wants to get rid of "satellite radio", because satellite service is better and, oops, cheaper. The NAB does NOT reap any benefits, so therefore, they want to shut down any and all competition. By using legislation and the court system, they will force the "satellite" industry to use up precious money and resources to defend themselves. This is exactly what Bill Gates and Microsoft did to their competition. Instead of trying to make their own service or products better, instead of trying to compete (fairly), they simply want to "bully" the smaller companies into submission. Although you are a politician, I hope you won't be influenced by the NAB into voting for 04-160. I'm probably wrong though, you aren't smart enough nor do you possess the integrity to vote NO, on NAB's 04-160 petition.
